SUMMARY

I have experience in the financial services industry, delivering business-unit support and ad hoc reporting using **Python, SQL, and workflow orchestration tools**. I build reliable automated workflows and perform data quality checks to ensure reporting accuracy and consistency.

EXPERIENCE

Data Analyst, Unicorn Fintech, Mar 2023 - Sep 2024

Taipei, Taiwan

- Transformed and aggregated data from normalised databases using SQL and Python to prepare datasets for business reporting and Power BI dashboards.
- Took the initiative to rebuild the daily sales report for the group's highest-revenue CFD brand, moving calculations previously done with Excel formulas into Python and SQL workflows orchestrated by Airflow; reduced output file size by 96% and cut manual reporting work by 85%.
- Consolidated customer classification logic into a database table - reducing stakeholder pushback and saving ~30% in communication and clarification time.

Research Intern, New Taipei City Government, Jul 2021 - Sep 2021

New Taipei, Taiwan

- Designed and developed a city-level COVID-19 dashboard using internal data, enabling senior officials to visually track case distribution and time-based trends across districts during the pandemic.

EDUCATION

University of Bristol, MSc Computer Science, Sep 2025 - Sep 2026

- Results: On track for Distinction (74.5%)
- Relevant modules: Object-Oriented Programming with Java (80%), Programming in C (75%), Software Engineering Discipline and Practice (73%), Overview of Software Tools (72%)
- Dissertation in herd management, with computer vision and machine learning

National Taipei University, BA Economics, Sep 2019 - Jun 2022

- Result: (82.4/100) GPA: 3.6/4.0
- Relevant modules: Data Processing, Economic Data Visualisation, Regression Analysis, Statistics, Programming for Data Science

PROJECTS

Personal Portfolio Website | [Live](#) · [GitHub](#)

An interactive 3D resume website that presents my experience, skills and contact links to recruiters.

- Built an interactive single-page portfolio with **React 19, Vite and Tailwind CSS**, and deployed it to **GitHub Pages** with a one-command build-and-deploy pipeline (gh-pages).
- Wrote a custom **GLSL fragment shader** for an animated noise background and a 3D header scene in **Three.js / React Three Fiber** with 100 animated meshes. All the meshes reuse one geometry and one material to keep GPU allocations down.
- Added **Google Analytics 4 / GTM** with custom react-ga4 events that track resume downloads separately from outbound profile clicks (GitHub, LinkedIn, LeetCode), to measure how recruiters engage with the site.

Tech: React, JavaScript, Three.js, React Three Fiber, GLSL, Tailwind CSS, Vite, GitHub Pages, Google Analytics 4

ADDITIONAL SKILLS

- Language: English (Advanced), Chinese (Native) - Mandarin, Japanese (Intermediate)
- Programming Languages: Python, JavaScript, Java, SQL, C
- Tools & Technologies: Power BI, Airflow, Git, Linux, dbt
