Graduate Software Engineer Candidate | MSc Computer Science, University of Bristol (2026)

PERSONAL STATEMENT

Former Data Analyst at a CFD company with hands-on experience in **Python, SQL, Airflow, and Power BI**, specialising in building reporting systems and workflow tools that drive business KPIs and accelerate decision-making. My background in bridging business logic with technical systems has equipped me with strong problem-solving skills and an ownership mindset to grow into a value-creating software engineer. With a foundation in structured thinking and a strong work ethic, I thrive in fast-moving environments where clarity, autonomy, and impact matter.

EDUCATION

University of Bristol

MSc Computer Science

Bristol, United Kingdom
September 2025 - Present

National Taipei University

Bachelor of Arts in Economics

New Taipei Taiwan
September 2019 - June 2022

- Relevant Coursework: Data Visualisation, Programming for Data Science, Statistics, Regression Analysis

EXPERIENCE

UnicornFintech (Data Tech Division of Vantage Group)

Data Analyst

Taipei Taiwan
March 2023 - September 2024

- Reduced manual reporting workload by 85% and shrank loaded data file size by 96% (300MB → 12MB) by developing automated reporting systems using Python, SQL, and Airflow—enhancing data accessibility for stakeholders across multiple departments.
- Enabled consistent next-day delivery of sales insights for regional sales leaders by designing and maintaining Power BI dashboards, improving KPI visibility and decision-making speed.
- Prevented ~35% interim staffing costs during headcount gaps by leading process handovers and knowledge documentation—avoiding the need for temporary hires over 2+ months.
- Improved sales team targeting accuracy by enhancing customer classification logic through a centralised database table—reducing stakeholder pushback and saving ~30% in communication and clarification time per campaign cycle.

New Taipei City Government

Research Intern

New Taipei Taiwan
July 2021 - September 2021

- Designed and developed a city-level COVID-19 dashboard using internal data, enabling senior officials to visually track case distribution and time-based trends across districts during the pandemic.
- Collaborated with interns from legal, medical, and policy backgrounds to analyse social issues such as energy problems and homeless animals, presenting data-supported policy suggestions to city department leads.

AUTODIDACTIC

Career Transition Preparation

October 2024 - August 2025

- [Completed 400+ LeetCode problems](#), significantly enhancing algorithmic problem-solving speed and coding accuracy.
- [Built 3D interactive web projects with Three.js](#), showcasing modern web development practices and creative design.
- [Studied system design](#) through **Grokking the System Design Interview**, gaining solid understanding of design patterns and best practices. Explored distributed system concepts (scalability, caching, load balancing) to support future backend development.

ADDITIONAL SKILLS

Programming and Searching Languages: Python, SQL, JavaScript

Tools & Technologies: PowerBI, Airflow, Docker, Git, GitHub

Applicational Skills: Data Cleaning, Visualisation

Soft Skills: Problem-solving, Adaptability, Collaboration

Language: English (C1 English level)、Mandarin (Native Speaker)
